M. Schep, P. Eng

**Implementation Cost**

\$9,000,000

## Compliance Assessment Services for the Oregon Transportation Improvement Act (OTIA) III Bridge Delivery Program

**Scope of Services**

Delcan has been retained to carry out compliance assessments to monitor:

- The project oversight teams' adherence to quality management procedures.
- The designers and constructor's adherence to quality control procedures and work product requirements.

**Project Description**

The Oregon Department of Transportation (ODOT) is undertaking an extensive program of statewide bridge improvements. A variety of funding sources support this initiative but the Oregon Transportation Improvement Act is providing the majority of funding for the more than 300 structures slated for rehabilitation or replacement. The program is managed by the Oregon Bridge Delivery Partners (OBDP), a private joint venture between Fluor Enterprises and HDR, in conjunction with the ODOT Regions. It will extend until 2011, using conventional and design-build contracting strategies to achieve the program goals committed by ODOT.

Assessment services include Management Plan Auditing and Construction/Operational Auditing to be implemented through a series of work orders covering preparatory and ongoing assessment work. The services are defined by a project specific assessment plan and strategy, procedures, and requirement lists. All are complemented by Delcan's assessment database management system.

The scope of the work includes development and implementation of a comprehensive construction, design and management compliance assessment program to assess the quality oversight activities of Oregon Bridge Delivery Partners.

## **COMPLIANCE ASSESSMENT SERVICES FOR THE OREGON TRANSPORTATION IMPROVEMENT ACT (OTIA) III BRIDGE DELIVERY PROGRAM**

OTIA III is an application of a compliance assessment service that focuses specifically on management of the program, particularly with respect to the way the program management consultant is managing work processes and procedures. Implementation and further development of the SQL Server-enabled assessment database was developed initially on Delcan's Denver Cosmix Program.
